OBJECTIVE

BCom Honours in Information Systems graduate from the University of Johannesburg, passionate about software development. Seeking a Software Developer position to apply technical skills and collaborate on innovative projects, with a long-term goal of building scalable and user-friendly web and mobile applications.

EDUCATION

BCom Honours in Information Systems

University of Johannesburg, Graduated

- **Relevant coursework:** Learning from Data, Predictive Analytics, IS Architecture, Cybersecurity, IS Research Methodology, IS Research Project, Strategic IS Management, IS Project Management, and IT Governance

BCom in Information Systems

University of Johannesburg, Graduated

- **Relevant coursework:** Data structures and algorithms, Object Oriented programming, Data Analytics, System Analysis, Database Systems, Project Management, Software Engineering Principles, IT Governance and Security, Enterprise Systems, Business Management and Strategy, and Networking

PROJECTS

Flexi – A platform for SMMEs

Flexi Group of Financial Services

Ongoing

- Developing Flexi, a platform under Flexi Group of Financial Services, designed as a solution for small, medium and micro enterprises (SMMEs).
- Live at: <https://flexi.africa>

International Miss South Africa – Pageant voting web app

Web Application

- Created International Miss South Africa, a web application for running a pageant and managing online voting.
- Live at: <https://imsa-chi.vercel.app/>

SpillAged – A water leakage reporting app

University of Johannesburg

2024

- Developed a water leakage reporting app that will help the government track where water is being wasted via leakages around the city to solve the problem of water shortages. Flutter was used for the mobile (Android) application, React was used for the admin dashboard (Web App) and Firebase was used as the central cloud database.
- Collaborated with a team of 6 students to improve the system's performance.
- Conducted User-testing and implemented feedback.

University Student and Admin login system second year project

University of Johannesburg

June 2023

- Developed a university login system using C# and Microsoft SQL Server as our database management system, in our second-year project.
- Collaborated with a team of 6 students to improve the system's performance.
- Conducted User-testing and implemented feedback.

SKILLS

- **Technical Skills:**
 - **Programming Languages:** Dart, C#, Python, JavaScript, TypeScript
 - **Frameworks:** Flutter, React.Js, Next.Js
 - **Tools:** Git, Shadcn, Tailwindcss, Vercel
 - **Databases:** Microsoft SQL Server, Firebase, Appwrite
- **Soft skills:**
 - **Problem-solving:** applied through debugging and optimizing projects, which led to a more efficient and secure application.
 - **Teamwork:** worked effectively in a group of 6 students, using agile methodologies to ensure that the project milestones were met.
 - **Communication:** Regularly presented progress updates and technical challenges to tutors and lecturers, fostering clear and productive discussions.
 - **Adaptability:** Quickly adapted to new programming languages and frameworks, such as mastering Dart and Flutter within a short timeframe for a final-year project.

CERTIFICATIONS

Johannesburg Business School

Programming & Grit – November 2023

- Completed an intensive program focused on problem-solving, algorithms, and introductory programming with Python
